# BARCELONA OCULOPLASTICS

We are very happy to present the 6th edition of BARCELONA OCULOPLASTICS (BOC '24), which will take place in April 26 and 27, 2024.

As you know, BARCELONA OCULOPLASTICS is a very dynamic meeting, of a very active nature, where surgical procedures and live treatments predominate over the theory that we all know. The spirit of this course has always been "how we do things" from the best professionals in the world directly to the attendees, in a generous, interactive, and jovial atmosphere.

We will have live surgical sessions with the latest trends oculoplastic surgery where different world experts will show their techniques and surgical tips. We will also have live workshops on the application of injectables for facial rejuvenation as well as treatments with lasers and other novelties in the field of facial aesthetics.

Another of the highlights, already a classic, will be the "Richard Collin Symposium of Palpebral Ptosis", where the latest advances and trends in Ptosis, possibly one of the most common and difficult problems to address in our specialty, are emphasized and discussed in depth.

As you know Barcelona is a welcoming city with very good weather in April, which offers many gastronomic, artistic, and architectural possibilities.

Register in: <http://www.barcelonaoculoplastics.org/>

We look forward to meeting you in person in April.

Best regards,

Ramon Medel
